PROUD TO SUPPORT THOSE WHO FIGHT FOR OUR FREEDOM

With many of our employees having served in our armed forces, we feel a strong connection with our men and women serving at home and abroad, as well as those in Law Enforcement that serve our communities 24 hours a day, 365 days a year. To honor your service, DPMS is proud to offer a Group Buy Program commemorating your service. We have made thousands of rifles for over 300 military and law enforcement groups over the past few years. Although they have already honored us by choosing DPMS, we are humbled by the number of flags, certificates of appreciation, and pictures we've received from these American heroes, and display these items proudly, each and every day at our factory.

To learn more about the DPMS Group Buy Program, see page 43 for details.

BENEFITS OF CRUSH WASHER:

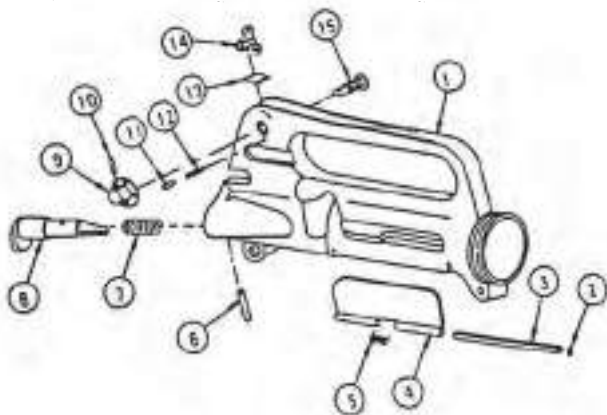

- One-piece design eliminates need for peeling laminated shims or adding/moving spacers.
- Achieves proper compensator alignment in one step.
- Automatically obtains proper torque when tightened with standard 3/4" wrench.
- Contains no adhesive that can melt and cause the compensators to loosen.
- Non-reflective surface. No more shiny shims on the "Black Rifle".
- Eliminates sharp edges common to laminated shims.

AR FREE-FLOATS/HANDGUARDS

CARBON FIBER FREE-FLOAT TUBES STANDARD AND CARBINE

The 2" diameter carbon fiber free-float handguards from DPMS stay cooler than the standard aluminum free-float tubes and weigh less, 40% less, providing you with a unique alternative to the traditional handguard. The carbon fiber utilized in these free-float tubes works in two ways: internally the unidirectional carbon fiber increases the strength and stability of the tube while externally the bi-directional carbon fiber provides a textured look and feel to the free-float tube. Additionally, an internal layer of fiberglass prevents corrosion between the aluminum tube and the carbon fiber, ensuring a long-lasting, lightweight alternative tube. Includes the hard anodized barrel nut.

FORSTER HEADSPACE GAUGES

The Headspace Gauge is designed to protect your firearms from unnecessary damage and you, the shooter, from possible injury by showing whether or not the "headspace" of an action is within tolerance. Essentially, headspace is the distance between the face of the breech and the base of the cartridge when the action is closed.

Forster Headspace Gauges are made with painstaking care to insure you accurate testing of the chamber. Each caliber Gauge comes in "GO", "NO GO", and "FIELD". If an action will not accept a "GO" Gauge, it will not accept cartridge cases of maximum length. If it accepts a "NO GO" Gauge the action may have excessive headspace. If the action accepts a "FIELD" Gauge, it should not be fired. Every firearms owner should have Forster Headspace Gauges for safety and accuracy.

Specify "GO", "NO GO" or "FIELD" length gauge when ordering.
